

**All Nydree Engineered Flooring Products
New Nydree Flooring Thickness of 0.430"
Recommendations for adding on or
replacing 0.325" plank Flooring**

Nydree Flooring 4" and 5.25" is now 0.430" in thickness (excludes Essentials and Wide Plank Collections).

Nydree cannot simply sand the new 0.430" plank thickness down to the old thickness specification of 0.325". The machining equipment in the entire production facility is now set up to run the 0.430" thickness in a very efficient manner.

There are many local hardwood dimensioning mills or wood processors that have the capability of accurately removing 0.105" (2.67mm) from the back side of the flooring plank. Many of them would be happy to discuss the removing of stock from the back of the 0.430" plank.

Jobsite or industrial planers could also remove the 0.105" from the back side of the plank but one must be careful not to damage the finish of the flooring. This just depends on the type of hold downs used on the planer.
